

Science supports spiritual development by providing many opportunities for children to think and spend time reflecting on the amazing wonders which occur in our natural world. The children are encouraged to ask questions about life, be creative thinkers, and relish opportunities for challenge and to make connections between areas of study. Looking at theories helps children to appreciate the mysterious elements of life.

Children confidently express their predictions and respect the ideas of others. Through practical work, children are given opportunities to alter their views against what they previously thought. Pupils can make rational judgements and have the ability to reason and explain.

Children cooperate and work well in small teams. They apply their learning to benefit the school community e.g. gardening. Science empowers our children to know their responsibilities as global citizens and teachers support them to exercise these responsibilities.

Science at St Finbar's develops a broad range of community links. Children learn about new ideas and theories. Children know how scientific concepts and understanding has shaped our culture and society.
